

## The ESG Blockchain Platform

### DevvX's Powerful Technology Providing Ultimate Trust

Devvio's Patented Technology Efficiently Manages Assets, NFTs, Records, Identity, and Payments. Devvio Has Spent over 4 years Building the Most Flexible, Scalable, and Cost-Effective Blockchain Solution.

Over 8 Million Transactions Per Second  
1/1,000,000<sup>th</sup> the Cost of Other Platforms

RESTful API for Secure and Efficient NFTs

### Devvio's Secret Sauce The DevvShard <sup>tm</sup>

Devvio has developed a proprietary implementation of blockchain sharding (parallelizing blockchain processing) which is the only solution of its kind in the world today. DevvShards provide scalability, cost-effectiveness, and most importantly flexibility.

DevvShards allow for the creation of any number of independent networks. These networks, or shards, represent the most flexible blockchain solution in existence. They work in unison and can be easily customized across any regulatory, geographical, or government requirements. DevvShards <sup>tm</sup> can be public or private, and can be tailored to throughput, security, regulatory requirements such as HIPAA or GDPR compliance, or any business/governance requirements.

## DevvESG

DevvESG is an ESG-focused (environmental, social, governance) blockchain effort where new companies and projects are launched, where ESG-related data with full provenance is tracked, and where world-wide ESG efforts are grown and incentivized.

Two of the biggest challenges in ESG are trust and multiparty collaboration. Devvio solves these problems.

DevvESG is a platform that can become a de facto standard for ESG efforts and a means to address the world's ESG challenges.

### The DevvESG Ecosystem

The DevvESG ecosystem consists of three components: The DevvX platform, the DevvESG Fund, and the DevvE cryptocurrency. All three components create a virtuous cycle where each one strengthens the others.

---

**The DevvX platform** is a regulatory compliant platform for managing token launches, asset registries, user identities, and exchange capabilities.

---

**The DevvESG Fund** is a venture fund for investing into ESG companies. It is managed by a world-class venture capital team and includes capital from DevvE sales.

---

**DevvE** is a legally compliant replacement for Bitcoin, focused on compliance, storage of value, the environment, and payments.

## The DevvE Cryptocurrency

### The 'E' Stands for ESG

**“Bitcoin uses more electricity per transaction than any other method known to mankind” -- Bill Gates**

DevvE is a regulatory compliant replacement for Bitcoin that addresses Bitcoin's two largest problems – regulatory compliance and energy usage. Where Bitcoin is not regulatory compliant and wastes enormous amounts of energy, DevvE is regulatory compliant and is designed to save the environment. Bitcoin uses 1,000,000 X more energy than DevvX. 90% of all DevvE issuances are used to fund our portfolio partners and their world-changing technologies and projects.

Like Bitcoin, DevvE represents a store of value with a comparable number of authorized coins (21 million), creating scarcity and value particularly given the other features of DevvE that contrast with Bitcoin. DevvE represents a public chain with no central authority overseeing transactions where any two parties can independently audit a transaction, and it has world-class Byzantine Fault Tolerant security.

## A World Class Team

Devvio has built a truly world-class team – it is one of our biggest strengths. Devvio's team is its most valuable asset. The team has particularly unique expertise in deploying enterprise-scale blockchain projects as well as experienced venture capitalists and amazing technical staff. More information about Devvio's team can be found at:

CONTACT: INFO@DEVV.IO

## DevvESG Focus

The DevvESG effort focuses on environmental, social, and governance related issues. Devvio is partnering with many companies in the ESG space. It is a compelling focus, as the key to creating, buying, and selling ESG assets, such as Carbon Offsets, is understanding the provenance of those assets. ESG and blockchain are two of the hottest spaces right now. Devvio's approach represents the future of ESG companies and financial instruments. It is rare to be able to combine such a strong financial story with doing so much good for the world. This effort is incredibly important.

## Portfolio Companies

DevvX is a platform for token launches and accessing capital. Portfolio Partner Companies can:

- Access new customers.
- Raise money on our platform.
- Create liquidity for otherwise illiquid assets.
- Release tokens representing assets, equity, utility, convertible debt, etc.
- Tap into the power of DevvX itself for operations.

Token sales can be used to grow community, leverage the powerful blockchain features of DevvX, and be used for utility within a Portfolio Partner's ecosystem.

## Partner Program

Devvio has developed a partner program for operating the DevvX platform. Partner Program members can make a significant impact in the world by helping to run the platform as Independent Node Operators, and in doing so, establish themselves as world leaders in advancing ESG philosophies. Partner Program members earn DevvE cryptocurrency (like miners on other platforms, but without the wasted energy and cost). Partner Program members also receive discounts on carbon offsets, DevvE cryptocurrency sales, first access to DevvX deals, and brand and stock awareness.

ESG can no longer be ignored by companies. A company's ESG efforts drive marketing perception and have significant effects on its financial metrics.
